SPC wall panels

A quick metamorphosis of the walls has never been so easy. Thanks to SPC wall panels, we can refresh any interior in an easy and quick way. Our attractive designs allow each interior to acquire a new and unique character. Due to the intuitive installation, SPC wall panels are a guarantee of a quick change in the room, while saving time and money.

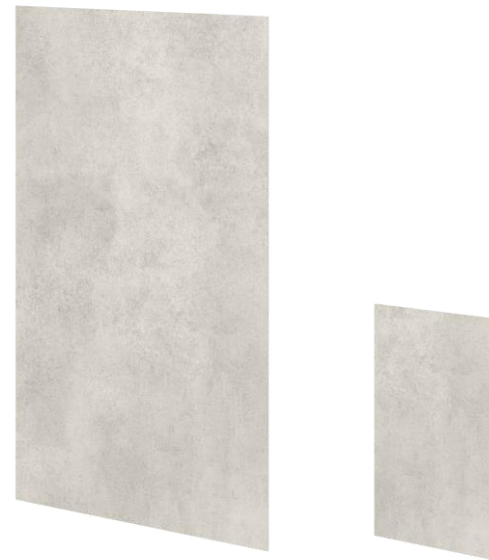

- Attractive patterns
- Matte and glossy designs
- 5 years warranty

Available formats

120 x 265 cm

Long-side panel connection

60 x 120 cm | 30 x 60 cm

Long-side and short-side panel connection

Technology

SPC wall panels are manufactured in the SPC (Stone Polymer Composite) technology, and their connection is tongue-and-groove, thanks to which:

- they are waterproof, so they can be used in rooms with high humidity, such as bathrooms or kitchens;
- they do not require grouting, and combining them gives a subtle effect. They are an interesting alternative to tiles;
- the installation is intuitive and simple, so you can enjoy the results immediately after finishing the work;

Precise connection without grouting

SPC wall panels interlock using a tongue-and-groove system, creating a stable and aesthetic connection without visible gaps. Thanks to precise fitting, they do not require grouting, which simplifies installation and ensures an elegant appearance.

High resistance

A series of tests in both indoor and outdoor laboratories have shown that SPC wall panels have a high impact resistance. The panels do not deform and their outer solid layer remains intact.

High quality material is resistant to staining from agents such as coffee or tea, to solutions of ethyl alcohol, acetic acid or sodium bicarbonate solution. Gentle cleaners are recommended for panel care.

Style and functionality

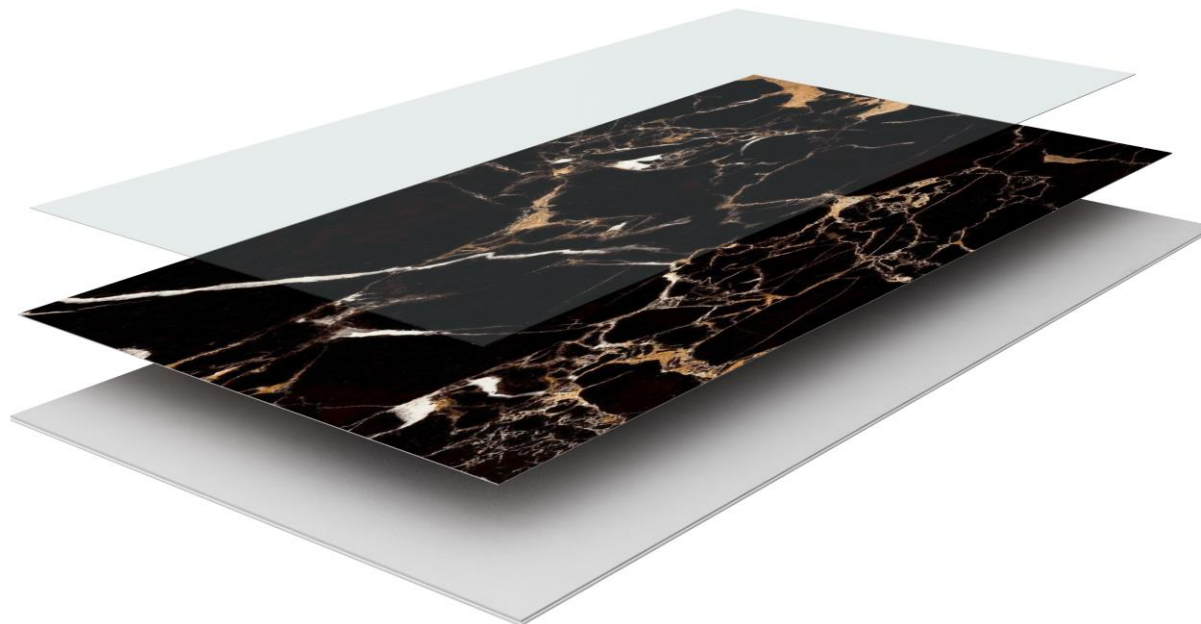

The Vilo SPC wall panel collection offers 14 designs, tailored to various interior styles. Glossy panels visually enlarge the space, giving it an exclusive feel, while matte panels, valued for their elegance, hide streaks and dirt.

The collection includes both smooth-surfaced panels and those with texture, adding depth and a natural character to interiors.

Panel structure

- Protective UV lacquer
- Decorative layer
- SPC composite core

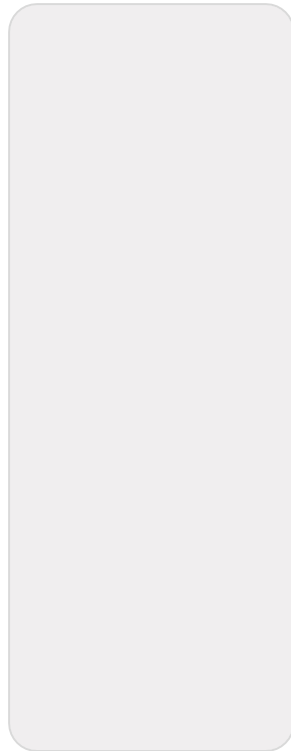

Why SPC wall panels?

- Easy to assemble
- Fast and intuitive
- Self-assembly, without the help of a specialist
- Waterproof product
- Installation with glue and basic tools

SPC wall panels vs. tiles

Easy to install :

- no need for specialized and expensive tools;
- the installation of SPC wall panels is clean – the panels do not generate as much dust as a tile when cut;
- no need to grout the panels or use the so-called crosses;
- the adhesive used to install the SPC wall panels dries quickly; the interior will be ready for use faster;

•
Hygienic:

- SPC wall panels do not require grouting, which helps avoid areas that can potentially be exposed to mould and fungi.

SPC wall panels vs. tiles

Easy to work with:

- SPC wall panels can be cut with a knife, obtaining various dimensions and shapes;
- the panels can be adjusted to the difficult points in the room faster and easier;
- the product is light – easy to transport and to install by oneself;

Thickness:

- SPC wall panels are 0.4 cm thick - taking up less space than tiles,
